To whom it may concern:

The New York State Department of Correctional Services currently operates two Wright Environmental In-Vessel composting units at Auburn Correctional (1500 lbs/day) and Riverview Correctional (3000 lbs/day).

Both of these units have fulfilled a need to divert food and wood waste from our waste disposal stream to realize avoided disposal costs and produce a high quality soil amendment for horticultural and agricultural enterprises within the Department.

The Wright Environmental units have functioned extremely well in exposed installations without the benefit of covering structures. The units have operated reliably in the extreme weather of upstate New York with little or no mechanical problems. The units operate seven days a week year-round, staffed by general confinement inmates inside the security perimeter. In no instance have we experienced odor or leachate incidents from the Wright units.

Our experience including design, bidding, installation, training and follow-up service with the Wright Company has been very positive. In the few instances where advice or repairs were required, immediate professional responses were received with excellent parts and repair service.

The Wright Environmental In-Vessel compost systems have proven to be a cost effective and environmentally sound strategy for our Department. We have found them to be all they claim to be and a pleasure to deal with. We look forward to the upcoming purchase of at least two more units.

Sincerely

  
James I. Marion  
Resource Management Director
