Re: Letter of Recommendation

Dear Ed:

I cannot say enough about the wonderful relationship Allegheny College has enjoyed with Wright Environmental Management, Inc. Our compost unit is up and running and doing just great. I will admit we were skeptical at first about the installation and the whole process of composting. The in-vessel unit, however, is so easy to operate and after working out a few bugs, we are well on our way to composting approximately 2000 pounds per day, which is the maximum for our unit. Dennis Osborne has been great in working with our operator, Ric Porter, to train Ric and in continually providing guidance when situations arise. Ric feels much more comfortable operating the machine now that he realizes it is so simple.

The up front work you folks did in working with us to insure we received the right package was greatly appreciated. The unit arrived and was set in place with no problems. The shaker is now installed and operating and the resultant material will work very well for making topsoil.

The in-vessel compost unit is a tremendous addition to our campus. Students are excited over composting and heavily involved in the whole process. It truly is an educational tool.

I would recommend the Wright In-Vessel Compost Unit to any agency looking to save dollars in trash hauling.

Thanks to Wright Environmental Management, Inc. for their work with us and we look forward to continuing our relationship in the future.

Sincerely,

Ken Hanna  
Director Physical Plant
